- Baltic Education Technology Institute, Lithuania
- Anne Fox
- Norwegian Association for Distance and Flexible Education
- Dipartimento di Informatica e Sistemistica, SAPIENZA universita' di Roma
- Centro de Formacao Profissional da Industria Metalurgica e Metalomecanica

Project description

The main aim of the project is to increase ICT competences among VET teachers, trainers and tutors (Leo-TraInno-3). The Leonardo project Vitae has developed a pedagogical model of how to teach VET teachers, trainers and tutors new ICT skills. The model is documented in the handbook: "Mentoring For 21st Century Skills, It's all about the Learning".

To take the results from the Vitae project further to new institutions, new countries, cultures and languages, is an overall goal for the project.
